

## On-Premises Video Messenger with Superior Interoperability

**Most messengers do not interoperate with legacy corporate IT infrastructure - telephony, video conferencing hardware, Skype, Exchange server – WE DO!**

## Interoperability

**TeamSpirit® IM** – secure enterprise messenger with video conferencing for teams and workgroups. TeamSpirit®IM provides a full set of features and options of popular IMs along with multipoint VideoMost videoconferences that are compatible with enterprise video conferencing hardware such as Polycom, Cisco, Avaya, Huawei and with Skype.

TeamSpirit® IM helps create comfort corporate workspaces to communicate, share and get work done together, like Cisco Spark and Microsoft Teams. On-premises server installation enhances enterprise data security. TeamSpirit® IM accelerates and facilitates companies' mobile interactions with their employees, clients and partners under their own brands.

## Source code

TeamSpirit® IM is not a cloud service, but a complete set of text messenger's source code, from UI to backend, which quickly enables rich, engaging messaging experiences in any corporate mobile app. Create your own chat-based space for teamwork and provide your employees and clients with instant access to everything they need through a single interface by TeamSpirit® IM integration with any business app or service.

## Security

All corporate data can be safely transferred over the VPN channels with end-to-end encryption to comply with the high security standards in big corporations and financial organizations.

The server administration panel enables management of groups, users and permissions to prevent leakage of corporate information. The system administrator can set up limitations for each client and set quota for a certain organization.

## White label

Licensees can use their brands for apps based on TeamSpirit® IM. So, clients and employees can communicate and collaborate within an application that is compliant with their company's corporate identity and requirements.

# TeamSpirit® IM platform's features

The TeamSpirit®IM platform provides a rich set of features for companies to increase their internal and external teams' productivity by sending text messages, task management and video conferences, as well as securely sharing documents, files and media content, sending contacts, notes and location, etc.

## Collaboration

- Video calls and video conferences
- Private and group chats
- Messages with attached photos, pictures, audio, video
- Sharing contacts and locations
- Playing media attachment without leaving the app
- Data storage on premises servers

## Text TeamSpirit® IM:

- Sending stickers and gif files
- User statuses: “online” and “is typing”
- Status for messages: “sent”, “received”, “red”
- Corporate ID: photo, name

## Video conferences in TeamSpirit® IM:

The full version of TeamSpirit® IM is seamlessly integrated the VideoMost Server and supports both HD video calls and multipoint video conferences with up to 100 interactive video participants in an online room. The product supports 16 video windows on a smartphone screen (both iOS and Android). Work team members from different departments, offices and regions always stay connected and can immediately join a video conference with corporate offices, using Polycom, Cisco, Avaya, Huawei hardware and their smartphones. A scalable video coding, which is supported by VideoMost Server, ensures the best possible voice and video quality on unstable Wi-Fi/3G/4G networks. The VideoMost mobile video was used by the leading telcos on hundreds smartphones models in dozens of Asian countries with a poor Internet connection.

## TeamSpirit® IM integration

TeamSpirit® IM can be extended by integration with additional options:

- Corporate contact list (using LDAP)
- Calendar, meetings, task manager
- Integration with project trackers (Trello, Jira, Confluence, InVision, GitHub etc.) with in-messenger notifications
- Message editing and deleting
- Alerts “join/leave”

The TeamSpirit® IM scalable platform can support external services integration:

- E-wallets and online payments
- Marketplace: order taxi, tickets, food delivery, on-line shopping, etc.
- News feeds
- Streaming services (music and video content)

License the TeamSpirit® IM platform to launch your business communications services.

Increase customers' loyalty by offering them all the features of a standard messenger together with a range of services from partners. All in one app with a single interface under your company's brand.
